# PROGRESS UPDATE | NOV 22, 2025 | SPRINT 8

SPRINT 8 (0/2) * 100 = 0 %

PROJECT COMPLETION = (17/38) * 100 = 44%

SPRINT 8 – Focuses on the community functionality of the system, where they can comment rate and discuss.

What went well: We manage to deploy our application, endpoints and database on our server and we manage to config our server based on what we need in the next sprint, such as posting data, retrieving data, access the initial ip address.

What could be improved: The completion of every task on sprint, it's hard to follow the wbs, because we almost carried over most of the task on the past sprints.

What needs to be done: Automation for deployment, Finish the carried over tasks.
