# PROGRESS UPDATE | December 20, 2025 | SPRING 12

SPRINT 12 (0/4) * 100 = 0%

PROJECT COMPLETION (31/38) * 100 = 81%

SPRINT 12 – Focuses on comprehensive system testing, including functional and integration testing, to identify, analyze, and resolve bugs. This sprint ensures system stability, reliability, and readiness for deployment.

What went well: We manage to finish all the core functionalities of our project and we already integrate external API where it's a profanity filter, also we resolve some bugs where the user try to interact on the flashcard set on community, the display of the slideshow is broke, we add a validations when the user try to share their sets in the community it should has at least 3 flashcard or question.

What could be improved: We are continuously evaluating the UI/UX and refining the design of it.

What needs to be done: Implement the external API, where when the user create a set it should also suggest what are the questions or definition he/she can add based on the title and description, find some bugs, clean the database.
